Presents a highly functional, low risk solution for the client wishing to gain web access to the full suite of information previously only available from the camp contractor – until now.

■ PEOPLE AND MOVEMENT

Visitor, R & R and roster based movement with the option to retain room while away. Delivers personnel, contact, medical, travel and compliance information. Exception reporting of no shows and no goes. 'Groups' processing assists in shutdowns, shift changes and transport based movement.

■ AVAILABILITY AND FORECASTING

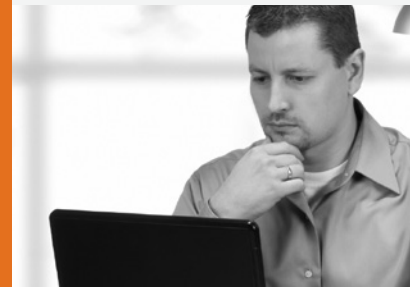

Reports current levels of availability, utilisation and occupancy by room and occupant. Forecasts in graphical form present a day and room centric view of forward bookings and returns, availability and occupancy.

■ BOOKINGS AND TRAVEL

Automation of flight and accommodation bookings using rosters, past and preferred movement patterns and a forward time horizon. A user friendly end user booking request interface accepts discrete booking requests for consideration by the camp contractor and travel co-ordinator

■ REPORTING

Reporting tools that leverage the power of the underlying SQL server database. A contemporary 'Vista' style user interface provides a myriad of run time choices including range selection, alternate views, common reporting templates plus totalling and summarisation options.

THE SOLUTION

A web based application for remote sites that delivers:

- End user booking requests electronically for both travel and accommodation.
- Query and reporting tools at the end user client's finger tips.
- Availability and forecasting of rooms and flights.
- Roster based scheduling of forward movements.
- Seamless integration between flights and accommodation.
- Occupancy, movement and man day reporting.

THE BENEFITS

- A fraction of the cost of 1st generation, 90s style monolithic camp systems.
- Easy access to information using query tools with optional download to spreadsheet.
- No flights without accommodation – no accommodation without flights.
- Easy to use with software that was designed and developed in the 21st century.
- Security and privacy ensured with password protection and data encryption.
- Improves utilisation of valuable accommodation and flight resources.
- Reduces staff resourcing by avoiding the "big" systems approach.
- Enables process improvement using automation and technology.
- Saves time and prevents error by auto-generating forward 'bookings' from rosters.

THE DIFFERENTIATORS

- The only system that delivers the camp operator's system to the client's web browser.
- Roles & responsibilities between camp operator & client are 'served & preserved'.
- VAMS is the contractor's choice so why not leverage existing skills, data and buy-in?
- User web movement requests = electronic confirmation and no paper.
- Multiple site support = many remote site systems feed to a single client interface.
- One system for operator and client = one dataset = no balancing errors.

THE UNIQUE VALUE OF VAMS

- The No.1 market leader in the camp contractor systems market.
- VAMS expertise pool easily sourced from many sites over many years.
- Minimum IT footprint means no complex IT to go wrong or slow you down.
- Ready-to-go on mobilisation day 1 with a computer and simple instructions.
- Low total cost of purchase, implementation, equipment and support.
- Track record of remote travel and accommodation management since 1983.
- Experienced in remote support with 100,000 rooms managed over 4 continents.
- Foreign language and multilingual support.
